
SFRplus Test Chart

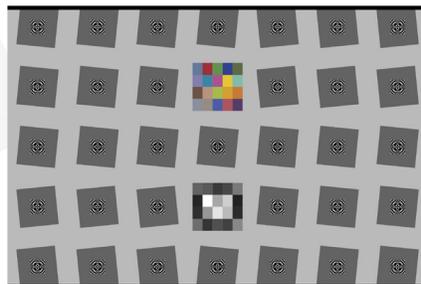

imatest's most efficient test chart

Why Imatest SFRplus Test Charts?

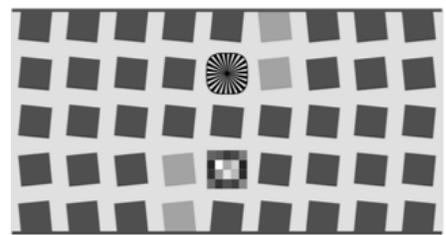

The Imatest SFRplus chart provides a highly detailed and comprehensive map of sharpness over an imaging system's field of view. SFRplus can be used for a wide range of testing scenarios, including systems with fish eye lenses, such as automotive imaging systems. SFRplus is available in standard planar, pre-distorted, and microscopic sizes, and can be printed on a variety of substrates. The chart is offered in multiple contrast ratios: 4:1, which meets the ISO 12333:2014+ standard, 10:1, two-toned 10:1 and 2:1, and higher ratios.
